## CS180 Fall 19 Homework 1

## Assigned 10/2, LATEST due date Wednesday 10/9 by 9:59 am or earlier

All algorithms/proofs should be in bullet form: step by step.

- 1. Exercise 3, Page 22
- 2. Exercise 4, on Page 22
- 3. Exercise 6 on page 25
- 4. Exercise 4 on page 67
- 5. (a) Prove (by induction) that sum of the first n integers  $(1+2+\ldots+mn)$  is n(n+1)/2
  - (b) What is  $1^3 + 2^3 + 3^4 + ... + n^4 = ??$  Prove your answer by induction.
- 6. How many tries do you need (in the worst case) in the two egg problem when there are 200 steps? what about n steps?
